

## Summary

I'm currently a senior at Sai Gon University studying IT. I love creating and making app and seeking for a internship position as a software engineer. I want to challenge myself and gain more experience for the future.

Love to keep myself updated with the latest technology and news from social media such as Reddit and others.

## Project

### **Library Management System with Java Swing**

- Learned to use MVC design patterns.
- Known how to handle event with custom listener.
- Learned basic knowledge about database relationship, set-up and manage the data by using JDBC.
- Applied multi-threading to optimize application.

### **Library Management System Web Application with ASP .NET CORE 5**

- Used Bootstrap 4, HTML for the theme.
- Got in touch with new technology and building web application.
- Learned to use Clean Architecture.
- Got used to using C# features like LINQ, Lambda Expression
- A more completed project with previous experience.

## Skills

- Efficient in Java, C#
  - Have a good foundation on OOP languages.
  - Strong working knowledge of Core Java or similar languages is desired
- Familiar with C++
- Use MySQL procedure to store and manage database
- Know basic Linux
- Upper-intermediate English skill can understand and delivery without hesitation (850 TOEIC Certification)

## Education

### **Đại Học Sài Gòn**

2018 – 2022

I haven't graduated yet, I needed to get back to finishes my last (5-6) classes and my graduation thesis in order to graduate. Hoping for 1-2 days off during the semester and flexible schedule.
